

BACTERIA

- Bacteria are living organisms
- They are so small we need a microscope to see them
- They come in different shapes
- They are found EVERYWHERE!
- Some bacteria are useful or even good for us
- Some bacteria can make us ill

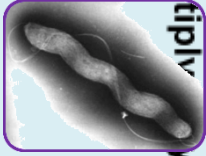

● There are three different types of bacteria. They look like:

● They are so small 1000s of bacteria could fit on the full stop at the end of a sentence.

● Some bacteria are useful in cooking, for example, making yogurt and cheese.
● Some bacteria are harmful and cause infection.

● Bacteria multiply very fast.
